FAQ and helpful information for caring for your Succulent Arrangement

WHERE SHOULD MY SUCCULENT LIVE?

Succulents love bright light: Morning sun or filtered sun helps to keep the succulents healthy and strong. Too much sun though and it may burn the succulent so move in summer months

WHAT HAPPENS IF A PART OF MY SUCCULENT FALLS OFF THE ARRANGEMENT?

If a leaf falls off just take it and pop it on some soil in a pot and it will grow into another succulent.

MY SUCCULENT IS NOT AS VIBRANT, WHAT IS WRONG?

If there is colour loss never fear your succulent just needs a little sunlight. But as mentioned before in summer months be careful not to over expose your succulent to the sun.

WHEN AND HOW MUCH DO I NEED TO WATER MY ARRANGEMENT?

Water when the soil is dry to the touch

During summer this might be as often as 2-3 times each week.

During winter probably more like 1-2 times a week.

A good drink stops your succulents from showing their age and getting wrinkly

DELIVERY OR ANY OTHER ISSUE

Please don't hesitate to contact Karen if there are any issues or questions that you have
